

Webmetrics Load Testing

Webmetrics Load Testing Services Overview

Load Testing helps you identify web performance bottlenecks, get a handle on how much traffic your site can handle, and make sure that your applications are ready for launch or high traffic periods like back-to-school season or Cyber Monday. Without testing you're taking the chance of experiencing performance issues in a live environment, or spending money on additional hardware or bandwidth when that could have easily been avoided. Testing your applications in a structured manner often identifies cost-effective opportunities for performance improvement saving you money in the long run, and provides real-world validation that you are ready to go live, protecting your brand and revenues.

Depending on the complexity of your testing requirements, and the resources and expertise you have available on staff, Webmetrics offers different solutions to meet your unique needs.

Our **Full-Service Load Testing** solution includes a dedicated engineer who is assigned to you for scripting, running tests and providing analysis and recommendations. We can get complex testing done for you quickly and offer you the benefit of our over 10 years of experience in the industry.

Our **On-Demand Load Testing** solution is sophisticated but also very flexible, allowing you to run tests at any time, night or day. It's also easy-to-use and you can get started immediately with a free test.

Full-Service Load Testing

- Fully managed solution with dedicated Load Test Engineer
- Fast turnaround time
- Clear, detailed reporting with test breakdowns and expert recommendations
- Supports virtually any web-based application via end-user simulations
- Support for web services (discrete and transactional)
- Near-infinite load generating capacity
- Multiple POPs/networks worldwide

On-Demand Load Testing

- Choose between Virtual Users (up to 500K), Real Browser Users (up to 5K), or a combination based on your needs
- Selenium open-source toolkit
- Export MySQL
- Real-time reporting and screenshots of load issues for fast debugging
- Object-level detail reports
- Easy-to-use, with painless scripting
- Fast set-up – start testing in minutes, plus run a free test immediately

Full-Service Load Testing

Webmetrics Full-Service Load Testing services provide a comprehensive overview of the performance capabilities of all your websites, web applications, and web services. Leveraging advanced proprietary technology, Webmetrics exercises your web application in a structured manner to uncover your most pressing load-related issues, including your system's end user performance when under load, your system's maximum capacity, and bottlenecks and design faults that may hinder your performance. Executive Summary Reports identify areas for further investigation, and also make recommendations for optimal configurations and performance best practices.

Full-Service Load Testing

Because this solution is full-service, there is no hardware to deploy or software to install. What's more, the Webmetrics team of experts handles all related test script generation, execution, reporting, and executive summary analysis.

Powerful Solutions for Common Performance Problems

Webmetrics Full-Service Load Testing enables your technology teams to act quickly in resolving looming and existing performance issues of all types, including:

- Bandwidth limitations
- Error rates exceeding thresholds
- Server CPU limitations
- Misconfigured web servers, application servers, and/or database servers
- Errant load balancing configurations
- Router/firewall failure or misconfiguration

Dedicated Test Engineers with End-to-End Expertise

A dedicated Test Engineer will be assigned to your business at the beginning of your engagement – and will stay with you until the end, providing:

- Detailed performance reports and technical observations, complete with executive summaries and analyses
- Clear, comprehensive recommendations to assist you in optimizing your customers' online experiences
- One-on-one discussions as needed (scheduled or ad hoc)
- Unbiased advice from an independent expert

With Webmetrics Full-Service Load Testing, comprehensive reporting and customized analyses come standard – and making informed decisions is easier than ever.

On-Demand Load Testing

Webmetrics On-Demand Load Testing offers a combination of flexibility and sophistication. You can benefit from the convenience of running tests at any time and the power of utilizing both Real Browser and Virtual Users for testing. On-Demand Load Testing is easy to use and provides a free test so you can get started immediately.

Real Browser Load Testing in the Cloud

Webmetrics offers the only solution with Real Browser Users for testing. This makes your life simpler – requiring less scripting and no rewriting. The real browser features also include support for Ajax and Adobe® Flash® video streaming. Virtual Users are available as well, so you can choose between a combination of Virtual Users and Real Browser Users, to best meet your testing needs and budget.

Webmetrics On-Demand Load Testing is a cloud-based solution, and able to generate massive amounts of simulated traffic from a huge pool of IP addresses – at the best possible price.

Flexible, Easy-to-Use Solution

When it comes to on-demand, you need a solution that's powerful but also simple to use. Webmetrics On-Demand Load Testing is easy to set up, easy to deploy, scalable and precise. You can literally get started with testing in minutes.

Because our service utilizes the Selenium open source toolkit, you can easily transfer over your existing scripts for testing. The MySQL export feature allows you to download data into your database for further analysis and reporting.

With convenient and customizable pricing options, you can choose the service that fits your load testing needs, including a basic free test and the option to upgrade when needed.
