Web Services Monitoring

Webmetrics Web Services Monitoring

The Internet defines collaboration—making it even more important for web-enabled companies and their business partners to take performance monitoring beyond their own internal infrastructures and stand-alone web applications. As Web Services have become the preferred API mechanism, Webmetrics Web Services Monitoring maximizes the uptime, speed, and reliability of your critical integrated business processes.

Web Services Monitoring is a flexible, hosted service that provides independent validation of availability, speed, reliability, and functionality by continually monitoring your interfaces from Webmetrics' worldwide performance monitoring network—or from behind the firewall.

One of the most advanced solutions of its kind available today, Webmetrics Web Services Monitoring covers both **single API** and **multi-step web services transactions** to validate SOA/WOA implementations, web services chains and application “mash-ups.”

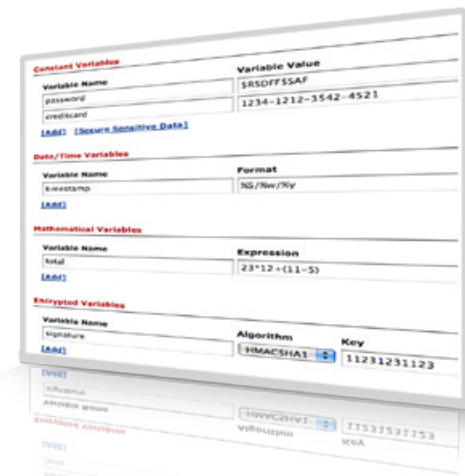

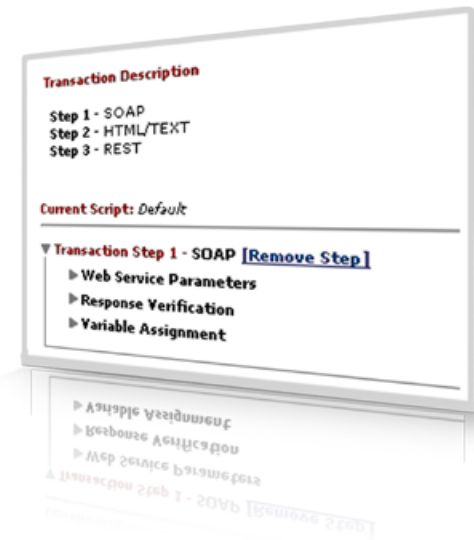

Web Services Monitoring

Webmetrics Web Services Monitoring is one of the most advanced external monitoring solutions available. The following features come standard:

- Support for **SOAP, REST, and HTTP** message types
- Monitors simple Web Services requests and/or complex **multi-step Web Services transactions** (APIs, B2B transactions, SOA, “mash-up” implementations)
- Measures response time and accuracy of response data
- Supports a variety of security encryption algorithms and mechanisms (**HMAC, MD5, SHA**)
- **Choice** of monitoring method—sequential or simultaneous for greater sample sizes

Key Benefits

- Enhanced productivity of web applications and services
- Increased level of service (via Web Services) to online customers and partners
- Third-party validation of the quality of your online applications and services
- SLA compliance management and reporting
- Eliminates risks of service violations or lost revenue resulting from application downtime
- Monitors Web Services applications from outside your network and firewall to assess performance from an end-user perspective
